Introductory Chapter: Analytical Pyrolysis-Gas ...
The pyrolysis temperature was set at 600 °C because it has been shown by previous research studies to be effective for the analysis of acrylic emulsion paint samples, by achieving the fragmentation of the synthetic organic pigments and the acrylic paint binder [10,42]. The temperature of the pyrolysis interface was 280 °C and that of the injector 250 °C.

Analytical pyrolysis-GC/MS proved to be a valuable hyphenated technique for the analysis and identification of synthetic organic polymeric materials. This technique allows the direct analysis of very small sample amounts (5–200 μg) without the need of time-consuming sample preparation.

Analytical Series: A Focus on Analytical Pyrolysis ...
Pyrolysis is most commonly used in the treatment of organic materials. It is one of the processes involved in charring wood. In general, pyrolysis of organic substances produces volatile products and leaves a solid residue enriched in carbon, char. Extreme pyrolysis, which leaves mostly carbon as the residue, is called carbonization.
