Deribit API

Data to be sent to the server. If the HTTP method is one that cannot have an entity body, such as GET, the data is appended to the URL.. When data is an object, jQuery generates the data string from the object's key/value pairs unless the processData option is set to false. For example, { a: "bc", d: "e,f" } is converted to the string "a=bc&d=e%2Cf". If the value is an array, jQuery serializes ...

private method could be accessed by providing, inside HTTP Authorization: Basic XXX header, values with user ClientId and assigned ClientSecret (both values can be found on the API page on the Deribit website) encoded with Base64: Authorization: Basic BASE64(ClientId + : + ClientSecret) This is the most easy way of authenticating ...

Build specification reference for CodeBuild - AWS CodeBuild

JSSE provides both an application programming interface (API) framework and an implementation of that API. The JSSE API supplements the core network and cryptographic services defined by the `java.security` and `java.net` packages by providing extended networking socket classes, trust managers, key managers, SSL contexts, and a socket factory ...

and \$1B for late-stage startups — - Crypto investor Katie Haun has raised \$1.5 billion for her new firm after a surprise departure from Andreessen Horowitz last year.

Techmeme: API discovery and management service RapidAPI ...

This topic provides important reference information about build specification (buildspec) files. A buildspec is a collection of build commands and related settings, in YAML format, that CodeBuild uses to run a build. You can include a buildspec as part of the source code or you can define a buildspec when you create a build project.
