Word-based morphology. Word-based morphology is (usually) a word-and-paradigm approach. The theory takes paradigms as a central notion. Instead of stating rules to combine morphemes into word forms or to generate word forms from stems, word-based morphology states generalizations that hold between the forms of inflectional paradigms.

The morphology of Arabic poses special challenges to computational natural language processing systems. The exceptional degree of ambiguity in the writing system, the rich morphology, and the highly complex word formation process of roots and patterns all contribute to making computational approaches to Arabic very challenging.

Arabic Computational Morphology - Bokus.com

MORPH2 (Kammoun et al., 2010) is based on a knowledge-based computational method. After identifying all the valid roots from all possible segmentations of the word on stem and affixes, an extraction step of morphosyntactic features based on research of possible vowelized forms of the word is performed.

Arabic Computational Morphology Knowledge Based

The subtitle aims to reflect that widely different computational approaches to the Arabic morphological system have been proposed. The book provides a showcase of the most advanced language technologies applied to one of the most vexing problems in linguistics. It covers knowledge-based and empirical-based approaches.
