The behavior of weak solutions to the Navier-Stokes and Euler equations is however mysterious: the equations appear to be too soft at this low smoothness level. One may exhibit weak solutions which have finite kinetic energy, and have compact support in time: the fluid is fully at rest, then it starts to move, and then it goes back to sleep.

Selected Solutions to Artin's Algebra, Second Ed.

This section contains solutions to selected problems from Artin's Algebra, 2nd ed. I have skipped most of the chapters, focusing on finite groups, rings, and fields. I have also skipped certain sections that I didn't find interesting or useful, as well as certain problems (especially those that seemed too tedious).

Solution for (c). H is not a subgroup since $1 \notin H$, though it is the inverse of 1. Solution for (d). H is a subgroup since it is clearly a subset, contains 1, is closed under multiplication since the product of two positive real numbers is a positive real number, and since $x \in H$ has inverse $1/x \in H$, which is still positive and real. Solution for (e).

1.1 What is Algebra? If you ask someone on the street this question, the most likely response will be: "Something horrible to do with x , y and z ". If you're lucky enough to bump into a mathematician then you might get something along the lines of: "Algebra is the abstract encapsulation of our intuition for composition".

Introduction to Abstract Algebra

Abstract: In our companion paper "The Manin Hopf algebra of a Koszul Artin-Schelter regular algebra is quasi-hereditary" we used the Tannaka-Krein formalism to study the universal coacting Hopf algebra $\text{aut}(A)$ for a Koszul Artin-Schelter regular algebra A . In this paper we study in detail the case of a polynomial ring in two variables.
