treatment. 2 Such anomalies are often associated with cardiovascular, craniofacial, neurologic, and other musculoskeletal abnormalities.

Congenital Deformities of the Upper Extremity

Congenital abnormalities affect between 1 and 2% of live births.

Of these, around 10% have upper-limb deformities 1, 2, 3.

Some of these deformities occur in isolation, but there are associations with systemic syndromes (4) that may involve blood dyscrasia, cardiopathies, central nervous system (CNS) malformations, digestive tract malformations or delayed neuropsychomotor development.

(PDF) Classification of Congenital Anomalies of the Upper Limb
