Linguistics is the scientific study of language, meaning that it is a comprehensive, systematic, objective, and precise study of language. Linguistics encompasses the analysis of every aspect of language, as well as the methods for studying and modelling them. The traditional areas of linguistic analysis include phonetics, phonology, morphology, syntax, semantics, and pragmatics.

Critical discourse analysis takes linguistic and psychosocial approaches one step further by analysing the data from a decidedly critical stance. These analyses examine the discourse – the social 'story' at play in the investigation – but also ask why that particular person is relating that particular tale.

Corpus linguistics is the study of a language as that language is expressed in its text corpus (plural corpora), its body of "real world" text. Corpus linguistics proposes that a reliable analysis of a language is more feasible with corpora collected in the field—the natural context ("realia") of that language—with minimal experimental interference.

Analysis has always been at the heart of philosophical method, but it has been understood and practised in many different ways. Perhaps, in its broadest sense, it might be defined as a process of isolating or working back to what is more fundamental by means of which something, initially taken as given, can be explained or reconstructed.

How Language Is Done . In the book, "Contemporary Linguistics," linguistics expert William O'Grady explains, "Psycholinguists study how word meaning, sentence meaning, and discourse meaning are computed and represented in the mind. They study how complex words and sentences are composed in speech and how they are broken down into their constituents in the acts of listening and reading.
