Concrete bridge in CSiBridge 2017

Modeling of Bridge Systems. CSiBridge implements a parametric object-based modeling approach when developing analytical bridge systems. This enables designers to assign bridge composition as an assembly of objects (roadway superstructure, substructure, abutments, piers, foundation system, etc.) before the SAPFire ® Analysis Engine, integral to CSI Software, automatically transfers the object ...

These videos cover a wide range of topics, from basic product overviews to advanced subjects such as nonlinear sequential construction. ... Integrated 3-D Bridge Analysis, Design and Rating. Integrated Structural Analysis and ...

Structural Bridge Design Software | CSiBridge

Specialized bridge groups may now be specified within each bridge object. Each bridge group applies to a particular type of component (slab, girder, bearing, etc.) and an individual bridge object. Depending on the bridge group type, groups may be defined for multiple items, multiple longitudinal ranges, and/or multiple transverse ranges.

The bridge models are defined parametrically, using terms that are familiar to bridge engineers such as layout lines, spans, bearings, abutments, bents, hinges and post-tensioning. The software creates spine, shell or solid object models that update automatically as the bridge definition parameters are changed.
