While the field of epigenetics is increasingly recognized to contribute to the emergence of phenotypes in mammalian research models across different developmental and generational timescales, the comparative biology of epigenetics in the large and physiologically diverse vertebrate infraclass of teleost fish remains comparatively understudied.

fish are still poorly understood. 28 Differences were found among different species at early developmental stages; however, there is a general agreement that B cell lymphopoiesis appears and occurs mainly in the kidney. The hematopoietic tissue is already present in the larval pronephros that later becomes the head (cephalic) kidney, where endocrine roles are also exerted by the adrenal homologue (steroidogenic and chromaffin cells).

Teleost - Wikipedia

Emily E. Killingbeck, Willie J. Swanson, in Current Topics in Developmental Biology, 2018. 5.4 Teleost Fish. Teleost fish are highly diverse, constituting almost half of the total number of vertebrates (Monne et al., 2006). This diversity is reflected in the architecture of teleost egg coats, which vary in thickness, structure, and number of layers both between and within species (Monne et al ...

Teleost. The teleosts or Teleostei (Greek: teleios, "complete" + osteon, "bone") are by far the largest infraclass in the class Actinopterygii, the ray-finned fishes, and make up 96% of all extant species of fish. This diverse group arose in the Triassic period, and members are arranged in about 40 orders and 448 families.

Early Development in Fish. In recent years, the teleost fish *Danio rerio*, known as the zebrafish, has become a favorite organism of those who wish to study vertebrate development. Zebrafish have large broods, breed all year, are easily maintained, have transparent embryos that develop outside the mother (an important feature for microscopy),...

The study of teleost fishes has long been a significant component of vertebrate developmental biology. Along with chick embryos and fetal pigs, we studied whitefish blastulas as part of our formal course work in embryology laboratories. The book has a special personal resonance for me in this regard.
