### **Digital Signal Processing Using MATLAB: A Problem Solving ...**

Digital signal processing (DSP) is the use of digital processing, such as by computers or more specialized digital signal processors, to perform a wide variety of signal processing operations. The signals processed in this manner are a sequence of numbers that represent samples of a continuous variable in a domain such as time, space, or frequency.

### **Digital Signal Processing Using The**

This term is used for digital encoding of "live" signals such as audio, video, temperature, pressure, position, etc. Digital signal processing allows these live signals to be stored, manipulated, edited, replayed, and transferred much more efficiently and accurately than by using strictly analog methods.
