List Of Animals That Lived With Dinosaurs: Information And ...

Way back in April, when I was supposed to be finishing my undergradate thesis, I wrote my first ever post for Love in the Time of Chasmosaurs - a Vintage Dinosaur Art guest post looking at an amusingly crap 1960s book named Dinosaurs of the Earth. When this book - simply titled Dinosaurs and Other Prehistoric Reptiles - arrived on Saturday, I was immediately struck by the similarities.

Dinosaurs And Other Reptiles From

During the Mesozoic Era, the reptiles - in particular the dinosaurs - would become the dominant land animals. The first reptiles split into several other branches, including the turtles, the swimming reptiles (including ichthyosaurs and plesiosaurs), lizards and snakes, and a group of animals called archosaurs.

...

Like other reptiles, dinosaurs are primarily uricotelic, that is, their kidneys extract nitrogenous wastes from their bloodstream and excrete it as uric acid instead of urea or ammonia via the ureters into the intestine. In most living species, uric acid is excreted along with feces as a semisolid waste.

One of the most geologically complex and diverse states,

Online Library Dinosaurs And Other Reptiles From The Mesozoic Of Mexico

California spent much of the age of dinosaurs under water. While most of the fossils found in the state are those of reptiles that lived in the sea (thalattosaurs, ichthyosaurs, mosasaurs, plesiosaurs, and turtles), some are those of birds and pterosaurs that soared above it.

Dinosaurs and Other Mesozoic Reptiles of California ...

During the Age of Dinosaurs there were other reptiles living on the land and in the seas. While these animals lived alongside dinosaurs, they did not have a hole in their hip socket and thus were not dinosaurs. Modern birds are one kind of dinosaur because they share a common ancestor with nonavian dinosaurs.
