Discrete Time Control System: Discrete time control system is con-trol system in which one or more variable can change only at dis-crete instants of time. These instants which are denoted by  $KT$  or  $t_k$   $0, 1, 2, \dots, k$  ( $T$  = , specify the times at which some physical measure-ments are performed. The time interval between two discrete instants

#### Discrete-Time Control Systems 1995.

The time interval between two discrete instants is taken to be sufficiently short that the data for the time between them can be approximated by simple interpolation. Discrete-time control systems differ from continuous-time control systems in that signals for a discrete-time control system are in sampled-data form or in digital form.
