Diversity in Living Organism CLASSIFICATION. Biodiversity: The variety of living beings found in geographical area is called biodiversity of that area. Amazon rainforests is the largest biodiversity hotspot in the world. Need for Classification: Classification is necessary for easier study of living beings. Without proper classification, it would be impossible to study millions of organisms ...

Organisms Diversity & Evolution | Home

Diversity of organisms. The total number of species living on the planet is imprecisely known and published estimates vary from 12 million to over 100 million. This is because there are large numbers of species yet undiscovered and undescribed, and there is not always agreement on whether certain organisms should be regarded as separate species.

Diversity In Living Organisms Wikipedia

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species.The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

Diversity in Living Organisms: Classification, Animal ...

A microorganism, or microbe, is a microscopic organism, which may exist in its single-celled form or in a colony of cells.. The possible existence of unseen microbial life was suspected from ancient times, such as in Jain scriptures from 6th century BC India and the 1st century BC book On Agriculture by Marcus Terentius Varro.The scientific study of microorganisms began with their observation ...
