multitude of techniques available in DNA Fingerprinting in Plants: Principles, Methods, and Applications, Second Edition. Along with step-by-step annotated protocols, the authors fully discuss the ...

DNA Fingerprinting and How It Is Used - The Balance

Advances in knowledge about the molecular structure of plant genome and development of techniques to rapidly characterise genomic variations have established DNA fingerprinting as a powerful tool for identifying plant species, varieties, clones, individuals and even plant products.

DNA Fingerprinting in Plants: Principles, Methods, and ...

DNA fingerprinting is used in medicinal plants for identification and authentication, for species differentiation, for adulteration detection and for

DNA fingerprinting in botany: past, present, future ...

DNA fingerprinting of plants and animals is performed for food security, food safety, identification and parentage. In food animals, DNA fingerprinting can be used to trace meat to the source animal. The technique can be used to identify endangered and non-endangered fish species, while the sources of plants can be verified to prevent counterfeiting of seeds and stock.

DNA Fingerprinting in Plants and Fungi - Kurt Weising ...

Plant DNA Fingerprinting: Methods and Protocols aims to bring together the different currently available genome-based techniques into one repository. This volume contains detailed protocols for the preparation of plant genomic DNA, fingerprinting of plants for the detection of intra-species variations, the use of DNA barcoding, as well as methods for the bioinformatic analysis of data.

DNA Fingerprinting in Plants - BiologyWise

All of these points aside, this is a good book and a useful addition to the shelf. It should be in the library (or preferably the lab) of all institutes carrying out DNA fingerprinting in plants. Its reference list is extensive, and it is a source of a wide range of interesting pieces of information.

DNA Fingerprinting Techniques for Plant Identification ...

The procedure for creating a DNA fingerprint consists of first obtaining a sample of cells, such as skin, hair, or blood cells, which contain DNA. The DNA is extracted from the cells and purified. In Jeffreys's original approach, which was based on restriction fragment length polymorphism (RFLP) technology,...

(PDF) Plant DNA fingerprinting: an overview

Multi-locus DNA profiling methods such as AFLPs have become the most commonly used DNA fingerprinting tool in plant systematics, mainly in situations where DNA sequencing produces insufficient phylogenetic resolution .

DNA fingerprinting in botany: past, present, future

It is also known as genetic fingerprinting, DNA typing, and DNA profiling. When used for forensic science, DNA fingerprinting makes use of probes that target regions of DNA specific to humans, thus eliminating any possibility of contamination by extraneous DNA from bacteria, plants, insects, or other sources.
