Use features like bookmarks, note taking and highlighting while reading Engineering the Revolution: Arms and Enlightenment in France, 1763-1815.

### Engineering in the New Industrial Revolution ...

An interesting, very well researched, and generally solidly written book on the apparently narrow topic of musket manufacture in France before and during the French Revolution. This is a very ambitious book. Alder is interested in writing history of technology as a form of social and political history.

### Ken Alder

Engineering the Revolution documents the forging of a new relationship between technology and politics in Revolutionary France, and the inauguration of a distinctively modern form of the "technological life." In this book, Ken Alder rewrites the history of the eighteenth century as the total history of one particular artifact—the gun—offering a novel and historical account of how material artifacts emerge as the outcome of political struggle.
