T. reesei endo-1,4- β -xylanase II (XYNII) was done by engineering the multiple arginines into the Ser/Thr surface of this gene (Turunen et al., 2002). This shifted optimal pH towards alkaline pH by 0.5–1.0 pH units and it increased the enzyme activity at high temperature.

Enzyme engineering

Enzyme engineering is the application of modifying an enzyme's structure (and, thus, its function) or modifying the catalytic activity of isolated enzymes to produce new metabolites, to allow new (catalyzed) pathways for reactions to occur, [7] or to convert from some certain compounds into others (biotransformation).
