Department of Statistics Malaysia Official Portal

Global energy consumption is projected to increase, even in the face of substantial declines in energy intensity, at least 2-fold by midcentury relative to the present because of population and economic growth. This demand could be met, in principle, from fossil energy resources, particularly coal. However, the cumulative nature of CO₂ emissions in the atmosphere demands that holding ...

Preventive healthcare, or prophylaxis, consists of measures taken for disease prevention. Disease and disability are affected by environmental factors, genetic predisposition, disease agents, and lifestyle choices, and are dynamic processes which begin before individuals realize they are affected. Disease prevention relies on anticipatory actions that can be categorized as primal, primary ...

The future of food and agriculture: Trends and challenges

Population growth and socio-economic development drive water scarcity. Population growth is a key driver of water scarcity, as rising populations drive increased demand for water. Consequently, the annual amount of available freshwater per person has declined by more than 20 percent in the last two decades.

The prevalence of MS in the United States | Neurology

It is estimated that annual population control efforts would need to continuously achieve 66-70% population reduction just to hold the wild pig population at its current level (14, 28). Estimates from Texas indicate that with current control methods, however,
