In computer science and information science, an ontology encompasses a representation, formal naming and definition of the categories, properties and relations between the concepts, data and entities that substantiate one, many, or all domains of discourse.More simply, an ontology is a way of showing the properties of a subject area and how they are related, by defining a set of concepts and ...

Ontology (information science) - Wikipedia

Natural language processing (NLP) is a subfield of linguistics, computer science, and artificial intelligence concerned with the interactions between computers and human language, in particular how to program computers to process and analyze large amounts of natural language data. The goal is a computer capable of "understanding" the contents of documents, including the contextual nuances of ...

North American and European countries built many large dams until 1975, after which both started to abandon a significant part of their installed hydropower because of the negative social and environmental impacts. However, there has been a recent trend of new large hydropower dams being built in developing countries, particularly in megabiodiversity river basins, such as the Amazon, the Congo ...

Written language differs from oral language in important ways (Perfetti et al., 2005). Written language oftentimes contains more complex sentence structures and more difficult vocabulary than spoken language (Akinvaso, 1982; Halliday, 1989). Thus, if children are having difficulty completing tasks that require the use of syntactic knowledge ...
