Shreya and Amy teamed up to bring a combinatorial identity to life. Using basketball as a mathematical playground, they showed two approaches to calculating how many ways a player could make or miss n shots, and thereby neatly led the viewer through a proof that the sum of the binomial coefficients “n choose k” from k = 0 to n equals 2^n.The video is goofy and fun: Amy writes (and ...

The domain tells us all of the inputs "allowed" for the function. For example, since we cannot input  $x = 0$  into the function  $f(x) = 1/x$ , as it would be undefined, its domain will not include this value of  $x$ . We can input any other value of  $x$ , so the domain of this function is  $\mathbb{R} - \{0\}$ . The range of a function tells us all of the possible outputs of this function ...
