Geodesy as the science which determines the figure of the earth, its orientation in space and its gravity field as well as its temporal changes, produces key elements in describing the kinematics and the dynamics of the deformable body "earth". It contributes in particular to geodynamics and opens

Geodesy Beyond 2000 The Challenges

Geodesy Beyond 2000. It is subdivided into six parts. The first five parts discuss the challenges of providing a stable global reference at the parts per billion level by space methods, the impact of recently approved dedicated satellite missions on the determination of a high resolution global gravity field and its refinements by airborne gravity,...

They made an important contribution to geophysics and geodynamics, but also to regional and global geoid determination. In his research career, Wenzel published more than 150 publications on global tidal research, gravity field research and geodynamics. In May 2000, the Earth Tide Commission awarded Hans-Georg Wenzel the ETC Medal Award posthumously.
