Lymphatic System Components

The lymphatic system is a network of tissues and organs that help rid the body of toxins, waste and other unwanted materials.

(PDF) Anatomy of the Immune & Lymphatic System

The lymphatic system can be thought of as a drainage system needed because, as blood circulates through the body, blood plasma leaks into tissues through the thin walls of the capillaries. The portion of blood plasma that escapes is called interstitial or extracellular fluid, and it contains oxygen, glucose, amino acids, and other nutrients needed by tissue cells.
