### How The Brain Evolved Language

If we want to know where our capability for complex language came from, we need to look at how our brains are different from other animals. This relates to more than just brain size; it is important what other things our brains can do and when and why they evolved that way.

### How humans evolved language | Reading - Advanced C1 ...

Neuroscientist Daniel Wolpert starts from a surprising premise: the brain evolved, not to think or feel, but to control movement. In this entertaining, data-rich talk he gives us a glimpse into how the brain creates the grace and agility of human motion.

Brook Larson Dr. Hallen Mid-Term Paper ... which have evolved separately and independently wherever there are groups of deaf people — all indigenous signed languages have much the same spatial structure. ... the timing of the neural messages firing the muscles is a brain function serving language production and ...

### Daniel Wolpert: The real reason for brains | TED Talk

We found activity in a tiny, little factory near the base of the brain called the ventral tegmental area. We found activity in some cells called the A10 cells, cells that actually make dopamine, a natural stimulant, and spray it to many brain regions. Indeed, this part, the VTA, is part of the brain's reward system.
