For L major and L donovani, cells were infected at a 5:1 parasite-to-cell ratio. All the cells compared had similar infection ratios, ranging from 200 to 600 parasites/100 cells. All the cells compared had similar infection ratios, ranging from 200 to 600 parasites/100 cells.

### **Ecosystem energetic implications of parasite and free ...**

A parasite is an organism that lives in another organism, called the host, and often harms it. It depends on its host for survival. Without a host, a parasite cannot live, grow and multiply. For this reason, it rarely kills the host, but it can spread diseases, and some of these can be fatal. Parasites,...
