This original collection features 100 of the best puzzles from the mid-20th-century column The Graham Dial, submitted by an international readership of workers in applied mathematics. Most include details of several problem-solving methods plus critiques of their efficacy, challenging readers to improve on the solutions. Themes include engineering situations, logic, number theory, and geometry.

## **Ingenious Mathematical Problems and Methods by Louis A ...**

It seems that certain mathematicians took this literary challenge literally, and Fadiman follows it with an excerpt from "Ingenious Mathematical Problems and Methods," by L. A. Graham, who had evidently posed the problem in a mathematics journal. Graham gives a solution by William W. Johnson of Cleveland for the general case of unequal circles.

I'm looking for puzzles or small exercises to illustrate "mathematical problem solving" to freshman students. Ideally, such a problem statement meets the following requirements: Easy to understand. The involved notions should be familiar from high school mathematics or daily live, and not be built upon a framework of abstract definitions.
