Python raw_input Example (Input From Keyboard) - nixCraft

Some evidence suggests that in grammatical development, bilingual children catch up to monolingual children in single language skills by the age of 9 or 10. 9 The bilingual-monolingual difference in vocabulary size may be lifelong, because vocabulary development does not have a point at which it is complete. 9,18,28 One last point to make ...

Input And Evidence The Raw

Input and Evidence: the raw material of second language acquisition is an empirical and theoretical treatment of one of the essential components of SLA: the input to language learning mechanisms. It reviews and adds to the empirical studies showing that negative evidence (correction, feedback, repetitions, reformulations) play a role in language acquisition in addition to that played by ordinary conversation.

Project MUSE - Input and Evidence: The Raw Material of ...

raw_input() takes exactly what the user typed and passes it back as a string. input() first takes the raw_input() and then performs an eval() on it as well. The main difference is that input() expects a syntactically correct python statement where raw_input() does not. Python 3: raw_input() was renamed to input() so now input() returns the exact string.

Review of "Input and evidence: The raw material of second ...

Exposure and input in bilingual development*. A growing literature on bilingual development explores relationships between language exposure and learning outcomes. Vocabulary size and pace of grammar learning have been claimed to be causally related to amounts or types of exposure to each language.
