Conventional transformer operations Operating your locomotive in the conventional environment. (continued) 1. Place your locomotive on Lionel or Lionel-compatible O-54 or larger track. 2. Power your locomotive at 12-18 volts with your alternating current (AC) transformer. Power your locomotive with an alternating current (AC) transformer Caution! only.

Railroad Commissary - railroad locomotive operating ...

Your new locomotive is pre-programmed at the factory to use Regulated Throttle Control (RTC) in Analog operation. RTC makes your locomotive operate as though it has the mass and inertia of a prototype locomotive. As a result, your locomotive will resist starting up too quickly if at rest and will resist changes in speed once moving.

Locomotives and Rolling Stock: Diesel and Electric

To stop the locomotive, bring the throttle down (but not so low that the sounds quit) and wait until locomotive slows to a standstill on its own. Reversing the Locomotive This simple operation is exactly the same as with standard locomotives. Bring the locomotive to a stop and turn the power all the way off.
