### **Mantel Clock Repair Manual**

In-between the two clock plates are all the clocks gears. These gears are held in place by a steel arbor that is pressed into the clock plate. As the gear turn the steel arbor rotates around while the clock plate remain stationary. Without oil friction will eventually cause the hole in the clock plate to enlarge and become elongated.

The left weight is for the hour strike and makes a gong noise at the top of each hour. If the clock is put in silent mode, only the center weight will drop. The lower the weight hangs, the closer it is to the end of the cycle. If your clock has winding points you will need to wind each point using a winding crank or key.
