Nutrition of the Critically Ill Obese Patient • LITFL ...

There is inconsistent evidence regarding the relationship between obesity and mortality for critically ill patients. In children, previous studies that use weight-for-age normalization generally identify the lowest ICU mortality risk in children who are mildly to moderately overweight.

Obesity and Mortality Risk in Critically Ill Children ...

The World Health Organization defines overweight and obesity as the condition where excess or abnormal fat accumulation increases risks to health. The prevalence of obesity is increasing worldwide and is around 20% in ICU patients. Adipose tissue is highly metabolically active, and especially visceral adipose tissue has a deleterious adipocyte secretory profile resulting in insulin resistance ...

Obesity in Critically Ill Patients, An Issue of Critical .

The disease has reached epidemic levels, with every state in the United States having more than one in five residents considered obese. The fast-growing number of people with obesity means that hospitals are caring for more bariatric patients who are critically ill, recovering from surgery or have complex medical needs.

We read with interest the article of Martino et al1 in a recent issue of CHEST (November 2011) reporting that obese critically ill patients survive at least as often as patients who are of normal weight. However, we believe this conclusion could send a misleading message. Although mortality rate has been adjusted on the APACHE (the Acute Physiology and Chronic Health Evaluation) II score in a ...

Obesity In Critically Ill Patients

Some 30–35% of adult ICU patients are obese, and 5% or more are morbidly obese.³ Patients who are both critically-ill and morbidly obese present unique challenges to care. These range from basic care, such as prevention of bedsores and ambulation, to sophisticated issues, such as medication dosing and ventilator management.

weight than non-obese patients to achieve the same target level.

Obesity and Nutrition in Critical Illness ...

Several pathophysiological mechanisms and clinical management-related factors could explain the decreased mortality in obese critically ill patients, including those with ARDS. Recent evidence suggests the existence of a protective response called pre-conditioning cloud where obesity induces a low-grade inflammation, generating a process that ...
