Overview of the Cranial Nerves - Brain, Spinal Cord, and ...

x We read with interest the report of transverse myelitis in a child with COVID-19 1. Various variants of COVID-19 associated Guillian Barre syndrome have also been reported, albeit rarely in children 2. We report a case of post-COVID Miller Fisher syndrome (MFS) in a 7-year-old child who presented with acute onset diplopia, nasal twang, drooling and an unsteady gait.

Optic Nerve Damage - Healthgrades

The anatomy of the optic nerve makes it a sensitive marker for problems inside the brain. This nerve connects the back of each eyeball and its retina to the brain. In its short span between the brain and the eye, the optic nerve's whole surface is bathed in cerebral spinal fluid. This fluid protects the nerve from sudden movement.

Home Page: Pediatric Neurology

Leber's hereditary optic neuropathy (LHON) is a mitochondrially inherited (transmitted from mother to offspring) degeneration of retinal ganglion cells (RGCs) and their axons that leads to an acute or subacute loss of central vision; it predominantly affects young adult males. LHON is transmitted only through the mother, as it is primarily due to mutations in the mitochondrial (not nuclear ...

Optic Nerve Hypoplasia - NORD (National Organization for ...

Made of nerve cells, the optic nerve is located in the back of the eye. Also known as the second cranial nerve or cranial nerve II, it is the second of several pairs of cranial nerves. It is a bundle of nerve cells that transmits sensory information for vision in the form of electrical impulses from the eye to the brain.
