Fiber Optic Communications - Tutorialspoint

Fiber-optic communication is a method of transmitting information from one place to another by sending pulses of light through an optical fiber. The light forms anelectromagnetic carrier wave that is modulated to carry information. Optical fiber is used by many telecommunications companies to transmit telephone signals, Internet communication, and cable television signals.

Fiber Optics in New Projects. Forbes reported recently that cities around the globe are beginning to use fiber optic cables for their communication needs. San Francisco, for example, is creating a city-wide fiber optic network as a way of treating the internet as a public utility.

Introduction to Fiber-Optic Communications - 1st Edition

An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data transfer rates) than ...
