Pain can be classified in numerous ways, such as the types of pain (nociceptive, neuropathic, inflammatory), by pain intensity (mild, moderate, or severe), or most commonly by duration of pain (acute or chronic pain) 1. It is helpful to understand the classification of pain as it helps in guiding assessment and treatment.

The treatment of pain is guided by the history of the pain, its intensity, duration, aggravating and relieving conditions, and structures involved in causing the pain. In order for a structure to cause pain, it must have a nerve supply, be susceptible to injury, and stimulation of the structure should cause pain.
