It is the genetic structure, which is responsible for structure and function of tissues, organs and organ systems in any organism. In other words, the physiological process depends upon the genetic composition of cells in all organisms.

Physiology is the scientific study of the functions and mechanisms which work within a living system. As a sub-discipline of biology, the focus of physiology is on how organisms, organ systems, organs, cells, and biomolecules carry out the chemical and physical functions that exist in a living system. Central to an understanding of physiological functioning is the investigation of the fundamental biophysical and biochemical phenomena, the coordinated homeostatic control mechanisms, and the conti
