A Z-Drage or Z-Rig is an arrangement of lines and pulleys, effectively forming a block and tackle, that is commonly used in rescue situations. The basic arrangement results in pulling the hauling end 3 times the distance the load is moved, providing a theoretical mechanical advantage of three to one. In actual practice the advantage will be reduced by friction in the pulleys or carabiners.

Transcribed image text: rough Block A of mass MA and block X are attached to a rope which passes over a frictionless, massless pulley, as shown in the figure. A force P is applied horizontally to block A, keeping it in contact with a rough vertical face. The coefficients of static and kinetic friction between the wall and block A are  $\mu_s$  and  $\mu_k$ , respectively.
