Sauroposeidon proteles Reconstructed. This illustration was inspired by the work of paleobiologists Matt Wedel, Mike Taylor and Darren Naish who write two of the best paleo blogs on the web, Sauropod Vertebrae Picture of the Week (SV-POW!) and Tetrapod Zoology (Tet Zoo). They are also badass paleobiologists who not only dig up fossils...

SAUROPOSEIDON : DinoChecker dinosaur archive

August 7, 2009. In an email, Vladimir Socha drew my attention to the fact that Tom Holtz’s dinosaur encyclopaedia estimates the maximum height of Sauroposeidon as 20 meters plus, and asked whether that was really possible. Here’s what Tom actually wrote: “Sauroposeidon was one of the largest of all dinosaurs.

Sauroposeidon Proteles A New Sauropod

Sauroposeidon (/ˌsɔːroʊpoʊˈsaɪdən/ SOR-o-po-SY-dən; meaning "lizard earthquake god", after the Greek god Poseidon) is a genus of sauropod dinosaur known from several incomplete specimens including a bone bed and fossilized trackways that have been found in the American states of Oklahoma, Wyoming, and Texas.

Sauroposeidon | **Dinopedia** | **Fandom**

The name Sauroposeidon is a reference to the Greek god Poseidon, who while usually depicted as a deity of the sea, also held domain over earthquakes. With Sauroposeidon being such a large and heavy dinosaur weighing many tons, it was thought to shake the ground like there was an earthquake when it walked, hence the connection.

Sauroposeidon Pictures & Facts - The Dinosaur Database

Sauroposeidon is a genus of sauropod dinosaur found in Oklahoma. It is one of the biggest dinosaur yet found. Sauroposeidon lived in what was then a river delta flowing into the Bay of Mexico. It was a plant-eater that probably ate leaves from the tops of trees, perhaps conifers and early flowering trees like magnolias, palms, and sycamores.
