ASP.NET can be used together with Microsoft Internet Information Services (IIS) to authenticate Web users based on their Microsoft Windows 2000 or Windows Server 2003 user account credentials. The ASP.NET execution engine can also be configured to impersonate Web users, or to use its own Windows identity when it accesses resources such as databases or files.

## **c# - How to secure an ASP.NET Web API - Stack Overflow**

Web Services - Security - Security is critical to web services. However, neither XML-RPC nor SOAP specifications make any explicit security or authentication requirements.

## **c# - Invoking a web service with WS Security from .NET**

...

I want to build a RESTful web service using ASP.NET Web API that third-party developers will use to access my application's data.. I've read quite a lot about OAuth and it seems to be the standard, but finding a good sample with documentation explaining how it works (and that actually does work!) seems to be incredibly difficult (especially for a newbie to OAuth).

## **Web Services - Security - Tutorialspoint**

If we want to secure our web method from an unauthenticated client request then there are many ways to do this but there is also a way to create a web service and create all the web methods for Authentication first so we can do that with a custom SOAP header.

## **Web Service(WS) Security Tutorial with SOAP Example**

So I contacted the service provider and they told me that the use of WS-Security is mandatory to invoke the service. Therefore, the SOAP message sent to the server must be digitally signed with my certificate. The problem is I don't know how to do that. So far I added a Service Reference and I'm passing the mentioned certificate in code:
