Serge Lang - Wikipedia
Given a complex-valued function f of a single complex variable, the derivative of f at a point z_0 in its domain is defined by the limit $f'(z_0) = \lim_{z \rightarrow z_0} \frac{f(z) - f(z_0)}{z - z_0}$. This is the same as the definition of the derivative for real functions, except that all of the quantities are complex. In particular, the limit is taken as the complex number z approaches z_0 , and must have the same value for any sequence of ...
