Single Handed General Practitioners | The BMJ

In the medical profession, a general practitioner (GP) is a medical doctor who treats acute and chronic illnesses and provides preventive care and health education to patients. A general practitioner manages types of illness that present in an undifferentiated way at an early stage of development, which may require urgent intervention.

Clinical practice guidelines in ... - BMJ Quality & Safety

The Shipman Inquiry has shown, in a survey of PCTs, that single-handed practices are out of favour; some PCTs have active policies to phase them out. But the problem in Shipman's practice was not single-handed practice but the patient-doctor relationship and the lack of any adequate external monitoring system.

To examine the concerns of singlehanded general practitioners working in an inner London area and to compare the views of general practitioners in partnerships.

The benefits of co-location in primary care practices: the ...

RESULTS: A total of 260 group practice general practitioners (80%) participated in the study and 80 single-handed general practitioners (56%) returned questionnaires, 78 of which could be analysed. Over half of all respondents were opposed or strongly opposed to both the 1990 contract and fundholding.

Med Doc | GP Jobs Ireland | General Practice | GP Jobs Ireland

Most dental practitioners work in a single handed practice and have little contact with other medical specialists, whereas doctors more commonly work in teams. Whether or not this influences the acceptance of clinical practice guidelines in dentistry has yet to be investigated.

Single Handed General Practitioners In

Single-handed practice is popular with patients, who choose to be registered , with a singlehanded practitioner. It is paradoxical, therefore, that single-handed practice is a tolerated, rather than an actively supported, way of delivering primary care services. The price that single-handed practitioners accept in order to practice in this way

Single-handed general practice

Single handed practitioners value their independence, control & satisfying personal care. Many single handers like myself who have worked in a group and larger practices can make a comparison and find the benefits of being single handed both to the practitioner and patients far outweigh some of the disadvantages.

Effect of doctors' ethnicity and country of qualification ...

RESULTS: A total of 260 group practice general practitioners (80%) participated in the study and 80 single-handed general practitioners (56%) returned questionnaires, 78 of which could be analysed. General practice - Wikipedia

Background:Single-handed practice, a traditional model of general practice, has been an important facet of primary care provision since before the establishment of the National Health Service in 1948, but has increasingly been challenged by the growth of large practices. Now less than 10 % of GPs ...

Patient-centred care after Shipman

For Type 1 Medical Practitioners (that is, General Practitioners who are partners or who work single handed) this means that they must resign from any involvement in a GMS contract, PMS agreement, or APMS Contract. Such GPs cannot undertake any NHS work, including locum, OOHs, or salaried employment, for at least 24 hours.

24 Hour Retirement for GPs - Avon Local Medical Committee

General practice is the name given in the United Kingdom to the service provided by General practitioners. In other countries similar services may be described as family medicine or primary care. The term Primary Care in the UK may also include services provided by community pharmacy, optometrist, dental surgery and community hearing care providers.

General practitioner - Wikimili, The Free Encyclopedia

David Henry Lewis, who died 10 years ago, was a London GP and perhaps the most colourful seafaring adventurer of the second half of the last century. Undeterred by his limited experience as a seaman he left his practice in the hands of a locum to compete in the first single-handed transatlantic race in 1960. He snapped his main mast a few hours out of Plymouth, yet still reached New York in 53 ...

(PDF) Singlehanded general practitioners and community care

The co-location of professionals in primary care settings involves a structural change in healthcare provision in many countries where traditionally general practitioners (GPs) work in single-handed practices, and in these contexts co-location is adopted to improve primary care, in pilot areas or more widely [1, 5, 7].

Changes in general practice organization: survey of ...

The aim of this study was to test the hypotheses that single handed general practitioners who are Asian (of Indian, Pakistani, Bangladeshi, or Sinhalese ethnic groups as defined in the 1991 census) and who qualified in the Indian subcontinent prescribe more items, more expensive items, and fewer generic drugs than their British trained Asian and non-Asian counterparts.

Single-handed general practice in urban areas of Scotland ...

[2] [3] In some healthcare systems GPs work in primary care centers where they play a central role in the healthcare team, while in other models of care GPs can work as single-handed practitioners. The term general practitioner or GP is common in the UK, Republic of Ireland, and several Commonwealth countries.
