A soft "g" sounds more like a "j," as in the words large, general, and giant. By contrast, a hard "c" sounds like a "k," as in the words cup, class, and fact. A soft "c" sounds like an "s" as in city, receive, and cell. Simple rules can help to determine whether the pronunciation of these consonants should be hard or soft.

The main findings showed that petting an animal reduced state-anxiety. This effect could not be attributed to the petting per se, since it was observed only with animals and not with matched toys. The anxiety-reducing effect of petting an animal applied to both the soft cuddly animals and the hard-shelled ones.

This toy is larger than the standard stuffed animal which has made it one of my daughter's favorites to snuggle at bedtime. It seems to be made of high quality materials, not cheap stuffing that flops around. My favorite feature is the soft fur, honestly it's that buttery soft plush! I thought it was a little strange that it has a belly button ...

Most soft-bodied animals are small, but they do make up the majority of the animal biomass. If we were to weigh up all animals on Earth with hard parts against soft-bodied ones, estimates indicate that the biomass of soft-bodied animals would be at least twice that of animals with hard parts, quite possibly much larger.
