## **Solutions Manual for Mechanics of Materials 7th Edition by ...**

Radar-absorbing material (RAM) is a specialist class of polymer-based material applied to the surface of stealth military aircraft, such as the F-22 Raptor and F-35 Lightning II (Fig. 13.19), to reduce the radar cross-section and thereby make them harder to detect by

# Download Free Solutions Statics Strength Materials

radar. These materials are also applied in stealth versions of tactical unmanned aerial systems, such as the Boeing X-45.

INTRO: Three positively charged particles, with charges  $q_1 = q$ ,  $q_2 = 2q$ , and  $q_3 = q$  (where  $q > 0$ ), are located at the corners of a square with sides of length  $d$ . The charge  $q_2$  is located diagonally from the remaining (empty) corner. Find the magnitude of the resultant electric field  $E_{net}$  in the empty corner of the square.

The need for bridges to span longer distances in this era, as well as to hold increasingly heavy loads, brought about many creative solutions in the form of new truss designs. Three names stand out as true pioneers in these early truss bridges: Timothy Palmer (1751-1821), Louis Wernwag (1770-1843), and Theodore Burr (1771-1822).
