Structured Finance

Structured finance is something of a catch-all term for bespoke financing techniques outside mainstream corporate (balance-sheet based) lending and financial market instruments. As such it's a fairly broad term covering a range of instruments from debt through to 'mezzanine' finance or equity capital.

The result of such an analysis can be a credit score or a probability of default (PD) for an obligor. The thus estimated PDs can refer to a fixed period of time, typically one year, or they can provide a complete term structure for the possible default event. These statistical approaches are the topic of Section 2.

Structured Finance: Overview

The first step in reducing the cost of capital is to change the mix of debt and equity used to finance the firm. Debt is always cheaper than equity, partly because it lenders bear less risk and partly because of the tax advantage associated with debt.
