As I reread my review nearly 50 years later, I think of the circumstances. I had heard a paper by Fred at the Ithaca meeting of the APA in 1932, and recall the praise by Edna Heidbreder, who was sitting next to me, whose remark was that "He has a clean mind." The year before his book appeared, I ...

We search for principles of animal behavior across species. The behavior of animals is not the behavior of their brains, but the processes emerging from the interaction between neural activity, body biomechanics and physiology, and environmental constraints. Recent advances in neuroscience comprise a wide range of "big tools" enabling the collection of "big data", both...
