Statistical inference is the process of using data analysis to infer properties of an underlying distribution of probability. Inferential statistical analysis infers properties of a population, for example by testing hypotheses and deriving estimates.It is assumed that the observed data set is sampled from a larger population.. Inferential statistics can be contrasted with descriptive statistics.

In a balanced design, all cell frequencies are equal, i.e. the number of observations in each combination of treatments is the same. So, for example, there would be 5 white males, 5 black males, 5 white females, and 5 black females. Balanced designs are unlikely in survey research but they are quite common (and
