The Elements Of Experimental Embryology

The first known study of comparative developmental anatomy was undertaken by Aristotle in the fourth century b.c.e. He noted the different ways that animals are born: from eggs (oviparity, as in birds, frogs, and most invertebrates), by live birth (viviparity, as in eutherian mammals), or by producing an egg that hatches inside the body (ovoviviparity, as in certain reptiles and sharks).

Primordial Germ Cell Development - Embryology

Journal of Embryology and Experimental Morphology 24 (1970): 173-86. Le Lièvre, Christiane, and Nicole Le Douarin. "Mesenchymal Derivatives of the Neural Crest: Analysis of Chimaeric Quail and Chick Embryos." Journal of Embryology and Experimental Morphology 34 (1975): 125-54. Minot, Charles Sedgwick.

Comparative Embryology - Developmental Biology - NCBI ...

Early in development at the time of gastrulation a small group of cells are "put aside" to later form oocytes and spermatozoa, these cells described as the primordial germ cells (PGCs). The cells migrate initially through the primitive streak into the posterior endoderm that forms the hindgut, and from there later into the genital ridge that will be the site of the developing gonad.
