direction. I'm going that-a-way at 30 kilometers per hour. My velocity is 30 kilometers per hour that-a-way. Average speed is described as a measure of distance divided by time. Velocity can be constant, or it can change (acceleration). Speed with a direction is velocity. Remember vectors?

Law of Motion ...

A body has kinetic energy when it is in motion. If a body of mass m is moving at a velocity v , then: Kinetic energy = $(1/2)mv^2$.

The kinetic energy of a body at velocity v is the work that must be done on the body to accelerate it to that velocity. Example: A rifle bullet of mass 4 grams is moving at a velocity of 1200 m/s. Calculate its energy.

Pendulum, body suspended from a fixed point so that it can swing back and forth under the influence of gravity. Pendulums are used to regulate the movement of clocks because the interval of time for each complete oscillation, called the period, is constant. The formula for the period T of a pendulum is $T = 2\pi \sqrt{L/g}$, where L is the length
