So, we can say that the below two equations are a system of linear equations. $2x + 1/2x + 3x + 1/3x = 1$. $1/5x + 2x + x + 5x = 0$. Here we can say we have 2 linear equations for 4 unknowns i.e. 2by4 linear system. We need linear equations/Linear systems almost every in our life even if that means doing calculations in our brain at times.

Solving Equations. Let us see how practical applications of algebra can be used to solve equations. You will often see equations like $3x + 4 = 5$, where you want to find x . Consider a situation from our daily life. The cost of a book is £5 more than the cost of a pen. Let us take the cost of the pen as £ x . Then the cost of the book is £ $(x + 5)$.

Dimensional formulae also help in deriving units from one system to another. It has many real-life applications and is a basic aspect of units and measurements. Suppose there is a physical quantity X which depends on base dimensions M (Mass), L (Length) and T (Time) with respective powers a , b and c , then its dimensional formula is represented as:

In algebra, a cubic equation in one variable is an equation of the form $ax^3 + bx^2 + cx + d = 0$ in which a is nonzero. The solutions of this equation are called roots of the cubic function defined by the left-hand side of the equation. If all of the coefficients a , b , c , and d of the cubic equation are not real numbers, then it has at least one real root (this is true for all odd-degree polynomial functions).
