In non-Euclidean geometry, the Poincaré half-plane model is the upper half-plane, denoted below as $H \{(,.) \mid >, \in\}$, together with a metric, the Poincaré metric, that makes it a model of two-dimensional hyperbolic geometry.. Equivalently the Poincaré half-plane model is sometimes described as a complex plane where the imaginary part (the y coordinate mentioned above) is positive.

Rear admiral (United States) - Wikipedia

Upper Half is a valuable resource that practically fulfils that entire void and answers questions that you hadn't even thought about. If you have ever struggled with being 'afraid' to use greater lean angle, or being unsure about the limits of traction - this is the book that can answer your questions.
