Respiratory arrest is caused by apnea (cessation of breathing) or respiratory dysfunction severe enough it will not sustain the body (such as agonal breathing).Prolonged apnea refers to a patient who has stopped breathing for a long period of time. If the heart muscle contraction is intact, the condition is known as respiratory arrest. An abrupt stop of pulmonary gas exchange lasting for more ...

Tracheostomy And Ventilator Dependency Management

Tracheostomy is an operative procedure that creates a surgical airway in the cervical trachea. [1, 2] It is most often performed in patients who have had difficulty weaning off a ventilator, followed by those who have suffered trauma or a catastrophic neurologic insult. [] Infectious and neoplastic processes are less common in diseases that require a surgical airway.
