Currently, no drug is licensed for the treatment of giardiasis in ruminants. Fenbendazole and albendazole (5–20 mg/kg/day for 3 days) significantly reduce the peak and duration of cyst excretion and result in a clinical benefit in treated calves. Paromomycin (50–75 mg/kg, PO, for 5 days) was found to be highly efficacious in calves.

### **Veterinary treatment of pigs (eBook, 2013) [WorldCat.org]**

Trichuris suis is found worldwide in pigs. The adult worms are 5–6 cm long and whip-shaped; the anterior slender portion embeds within the epithelial cells of the large intestine, especially the cecum, with the thickened posterior third lying free in the lumen.
