Colds and the Flu | Respiratory Infections During Pregnancy

The Epstein-Barr virus (EBV), or human herpes virus 4, is a part of the human herpes virus family and is the most common human virus. Most people will have evidence (antibodies to EBV in their blood) of prior EBV infection by the age of 35. Once infected with EBV, you carry the virus for the rest of your life, though usually in the dormant state.

Virus Infection In Pregnancy Monographs

Viral infections during pregnancy have long been considered benign conditions with a few notable exceptions, such as herpes virus. The recent Ebola outbreak and other viral epidemics and pandemics show how pregnant women suffer worse outcomes (such as preterm labor and adverse fetal outcomes) than the general population and non-pregnant women.
